Maximum Marks	2 Marks

Customer Journey Map

This map traces the customer's journey step by step, highlighting what they do, where they interact with the system, what they're thinking and feeling, who owns each part of the process, and where things could be improved along the way.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions	The prediction model processes the submitted application to assess it.	The applicant is notified whether their request was approved or turned down.	The applicant completes and submits the credit card application online.
Touchpoint	Automated scoring engine	Notification via email, text message, or the bank's portal	Bank website or mobile application
Customer Thought	"How does the bank actually make this decision?"	"I feel relief or excitement if approved, and disappointment if turned down."	"I hope the information I provided meets the requirements."
Customer Feeling	Curious, a bit anxious	A mix of confident happiness or discouraged frustration, depending on outcome	Uncertain and nervous
Process Ownership	Application operations and underwriting teams	Customer success and underwriting	Marketing and product teams
Improvement Opportunities	A pre-check tool, progress indicators, and quicker document verification	Quicker notifications, clearer next steps, and guidance for soft declines	Clearer eligibility filters and an FAQ covering edge cases
