

## Solution Requirements

|                      |                                 |
|----------------------|---------------------------------|
| <b>Date</b>          | 26 June                         |
| <b>Team ID</b>       |                                 |
| <b>Project Name</b>  | Credit Card Approval Prediction |
| <b>Maximum Marks</b> | 4 Marks                         |

### Define Functional and Non-Functional Requirements

This document outlines both the functional and non-functional requirements for the Credit Card Approval Prediction System.

#### Step 1: Functional Requirements (FR)

| S.NO | Requirement Category   | Requirement Description                                                              | Priority |
|------|------------------------|--------------------------------------------------------------------------------------|----------|
| 1    | Business Logic         | Approval decisions factor in income level, credit score, and repayment track record. | High     |
| 2    | Regulatory Compliance  | Adheres to banking data privacy regulations.                                         | High     |
| 3    | Login & Authentication | Provides secure sign-in for administrators and bank employees.                       | High     |
| 4    | Miscellaneous          | Keeps a log of all prediction activity.                                              | Medium   |
| 5    | Application Processing | Checks applicant-submitted data and generates an approval prediction.                | High     |
| 6    | Access Control         | Restricts system access based on user roles.                                         | High     |
| 7    | Reports & Insights     | Generates a dashboard along with prediction reports.                                 | Medium   |
| 8    | System Integrations    | Connects with the ML model, the database, and CSV import functionality.              | High     |

#### Step 2: Non-Functional Requirements (NFR)

| S.No | NFR Category         | Requirement Description                         | Target Metric/<br>Acceptance Criteria |
|------|----------------------|-------------------------------------------------|---------------------------------------|
| 1    | Data Security        | Sensitive information is encrypted.             | AES-256                               |
| 2    | Ease of Use          | Interface is responsive and simple to navigate. | User friendly                         |
| 3    | Uptime & Reliability | System remains highly available.                | 99.9% uptime                          |
| 4    | Miscellaneous        | Designed to be maintainable and portable.       | Modular design                        |
| 5    | Speed & Performance  | Predictions are generated quickly.              | < 10 seconds                          |
| 6    | Scalability          | Handles a large volume of applicants.           | 1000+ records                         |
